

Simple Product

Adapted by Neilor Tonin, URI  Brazil

Timelimit: 1

Read two integer values. After this, calculate the product between them and store the result in a variable named **PROD**. Print the result like the example below. Do not forget to print the end of line after the result, otherwise you will receive “*Presentation Error*”.

Input

The input file contains 2 integer numbers.

Output

Print **PROD** according to the following example, with a blank space before and after the equal signal.

Input Samples	Output Samples
---------------	----------------

3 9	PROD = 27
--------	-----------

-30 10	PROD = -300
-----------	-------------

0 9	PROD = 0
--------	----------
