

# Extremely Basic

Adapted by Neilor Tonin, URI  Brazil

## Timelimit: 1

Read 2 integer values and store them in variables, named **A** and **B** and make the sum of these two variables, assigning its result to the variable **X**. Print **X** as shown below. Don't present any message beyond what is being specified and don't forget to print the end of line after the result, otherwise you will receive “*Presentation Error*”.

## Input

The input file contain 2 integer values.

## Output

Print the variable **X** according to the following example, with a blank space before and after the equal signal. 'X' is uppercase and you have to print a blank space before and after the '=' signal.

Input Samples    Output Samples

10	X = 19
9	

-10	X = -6
4	

15	X = 8
-7
